

Using Django Forms

- In your Git repository:
 - Django Forms example code
 - Django Models registration sample solution
- Update the Models registration sample solution to use Django Forms.
 - For each action (`create_student`, `create_course`, `register_student`):
 - Create a new form in `forms.py`.
 - Focus on necessary validation within your forms.
 - Modify the action in `views.py` to use the form.
 - Optionally, modify `templates/sio.html` to use the form.
